

# VPAT™

## Voluntary Product Accessibility Template®

### Version 1.3

The purpose of the **Voluntary Product Accessibility Template**, or **VPAT™**, is to assist Federal contracting officials and other buyers in making preliminary assessments regarding the availability of commercial “Electronic and Information Technology” products and services with features that support accessibility. It is assumed and recommended that offerers will provide additional contact information to facilitate more detailed inquiries.

The first table of the Template provides a summary view of the Section 508 Standards. The subsequent tables provide more detailed views of each subsection. There are three columns in each table. Column one of the Summary Table describes the subsections of subparts B and C of the Standards. The second column describes the supporting features of the product or refers you to the corresponding detailed table, e.g., “equivalent facilitation.” The third column contains any additional remarks and explanations regarding the product. In the subsequent tables, the first column contains the lettered paragraphs of the subsections. The second column describes the supporting features of the product with regard to that paragraph. The third column contains any additional remarks and explanations regarding the product.

---

**Date:** 12/6/2015

**Name of Product:** Foodservice and Nutrition Service Suite

## Section 1194.21 Software Applications and Operating Systems – Detail

### VPAT™

### Voluntary Product Accessibility Template®

| <i>Criteria</i>   | Supporting Features      | Remarks and explanations   |
|---|--------------------------|--|
| <p>(a) When software is designed to run on a system that has a keyboard, product functions shall be executable from a keyboard where the function itself or the result of performing a function can be discerned textually.</p> | Supports with exceptions | <p>FSS/NSS is fully functional using a standard keyboard. Over 90% are text based and accessed either through the main menu via keyboard using TAB or accelerator key options (Alt+Key).</p> <p>Some software functions can only be executed with mouse click, such as right mouse click to open 'Ingredient Info' pop-up menu from Card File Selections. Additionally, the NSS Create Menu Panel/Template designer tools require a mouse to interact with the toolbar</p> |

|   |          |  |
|---|----------|--|
|   |          | icons and to resize and position the placeholder fields.   |
| <p>(b) Applications shall not disrupt or disable activated features of other products that are identified as accessibility features, where those features are developed and documented according to industry standards. Applications also shall not disrupt or disable activated features of any operating system that are identified as accessibility features where the application programming interface for those accessibility features has been documented by the manufacturer of the operating system and is available to the product developer.</p> | Supports | FSS/NSS does not disable or interfere with any accessibility features of the host Windows operating system on which it runs, or any 3 <sup>rd</sup> party add-ons supported by Windows.  |
| <p>(c) A well-defined on-screen indication of the current focus shall be provided that moves among interactive interface elements as the input focus changes. The focus shall be programmatically exposed so that Assistive Technology can track focus and focus changes.</p>   | Supports | FSS/NSS uses standard Windows operating system controls to indicate the focus of Windows and dialog controls. Focus can be changed using either the mouse or a keyboard. The title bar will change color and highlight the active window or selected drop-down options or highlight selected text. In forms requiring text entry, there will be a blinking cursor (I-bar) in the selected field. |

|   |                                |  |
|---|--------------------------------|--|
| <p>(d) Sufficient information about a user interface element including the identity, operation and state of the element shall be available to Assistive Technology. When an image represents a program element, the information conveyed by the image must also be available in text.</p> | <p>Support with exceptions</p> | <p>FSS/NSS relies on the Windows operating system and its accessibility components to make available any information from the software's interface. Most toolbar images and image buttons have 'tool tips' for equivalent textual representations.</p> <p>There are a few image button controls which do not have textual information displayed such as the trash bin icon shown in the Meal Food List Editor.</p> |
| <p>(e) When bitmap images are used to identify controls, status indicators, or other programmatic elements, the meaning assigned to those images shall be consistent throughout an application's performance.</p>   | <p>Supports</p>                | <p>All images are consistently used throughout the application.</p>  |
| <p>(f) Textual information shall be provided through operating system functions for displaying text. The minimum information that shall be made available is text content, text input caret location, and text attributes.</p>  | <p>Supports</p>                | <p>All text information is displayed using standard Windows functions and programming interfaces.</p>  |
| <p>(g) Applications shall not override user selected</p>  | <p>Supports</p>                | <p>FSS/NSS allows</p>  |

|  |                       |   |
|--|-----------------------|---|
| <p>contrast and color selections and other individual display attributes.</p>  |                       | <p>customization of user-selected Windows interface elements such as color and contrast based on Windows display settings.</p>  |
| <p>(h) When animation is displayed, the information shall be displayable in at least one non-animated presentation mode at the option of the user.</p>                           | <p>Not applicable</p> | <p>FSS/NSS does not use animated components.</p>  |
| <p>(i) Color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.</p>            | <p>Supports</p>       | <p>FSS/NSS uses color as visual indicator on some windows and displays, for example, non-compliant items are displayed in red italics font to differentiate them from compliant items. Additionally, the application's "validation error" windows will list information about the type of error with a white X on red background icon/ and red font text explaining</p> |
| <p>(j) When a product permits a user to adjust color and contrast settings, a variety of color selections capable of producing a range of contrast levels shall be provided.</p> | <p>Supports</p>       | <p>There is only one setting in NSS which support user-defined colors—Tray Tracking Settings. This setting actually applies to the configuration of our</p>   |

|   |                       |  |
|---|-----------------------|--|
|   |                       | <p>web-based companion product, Tray Monitor. Tray Tracking Settings provide numerous choices of background colors with contrasting fonts for the user to select.</p>  |
| <p>(k) Software shall not use flashing or blinking text, objects, or other elements having a flash or blink frequency greater than 2 Hz and lower than 55 Hz.</p>   | <p>Not applicable</p> | <p>FSS/NSS does not use flashing or blinking text.</p>   |
| <p>(l) When electronic forms are used, the form shall allow people using Assistive Technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.</p> | <p>Supports</p>       | <p>FSS/NSS uses standard Windows and dialogs. Support is available for tabbing between controls and most menus/dialogs also have defined shortcut keys. Forms typically have text labels to the immediate left of where the user is to enter information however checkbox elements may have the text label on either the right or the left given the available screen space and layout. A few graphics buttons (i.e., toolbar options for print, help, close) have tool tips text that displays.</p> |

## **Section 1194.22 Web-based Internet information and applications –**

### **Detail**

## **VPAT™**

### **Voluntary Product Accessibility Template®**

| <b>Criteria</b>  | <b>Supporting Features</b> | <b>Remarks and explanations</b>         |
|--|----------------------------|---|
| (a) A text equivalent for every non-text element shall be provided (e.g., via "alt", "longdesc", or in element content).                         | Not applicable             | FSS/NSS is a Windows-based application. |
| (b) Equivalent alternatives for any multimedia presentation shall be synchronized with the presentation.   | Not applicable             | FSS/NSS is a Windows-based application. |
| (c) Web pages shall be designed so that all information conveyed with color is also available without color, for example from context or markup. | Not applicable             | FSS/NSS is a Windows-based application. |
| (d) Documents shall be organized so they are readable without requiring an associated style sheet.   | Not applicable             | FSS/NSS is a Windows-based application. |
| (e) Redundant text links shall be provided for each  | Not applicable             | FSS/NSS is a                            |

|  |                |   |
|--|----------------|---|
| active region of a server-side image map.  |                | Windows-based application.              |
| (f) Client-side image maps shall be provided instead of server-side image maps except where the regions cannot be defined with an available geometric shape.   | Not applicable | FSS/NSS is a Windows-based application. |
| (g) Row and column headers shall be identified for data tables.  | Not applicable | FSS/NSS is a Windows-based application. |
| (h) Markup shall be used to associate data cells and header cells for data tables that have two or more logical levels of row or column headers.   | Not applicable | FSS/NSS is a Windows-based application. |
| (i) Frames shall be titled with text that facilitates frame identification and navigation  | Not applicable | FSS/NSS is a Windows-based application. |
| (j) Pages shall be designed to avoid causing the screen to flicker with a frequency greater than 2 Hz and lower than 55 Hz.  | Not applicable | FSS/NSS is a Windows-based application. |
| (k) A text-only page, with equivalent information or functionality, shall be provided to make a web site comply with the provisions of this part, when compliance cannot be accomplished in any other way. The content of the text-only page shall be updated whenever the primary page changes. | Not applicable | FSS/NSS is a Windows-based application. |
| (l) When pages utilize scripting languages to display content, or to create interface elements, the information provided by the script shall be identified with functional text that can be read by Assistive Technology.  | Not applicable | FSS/NSS is a Windows-based application. |

|  |                |   |
|--|----------------|---|
| (m) When a web page requires that an applet, plug-in or other application be present on the client system to interpret page content, the page must provide a link to a plug-in or applet that complies with §1194.21(a) through (l).                                       | Not applicable | FSS/NSS is a Windows-based application. |
| (n) When electronic forms are designed to be completed on-line, the form shall allow people using Assistive Technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues. | Not applicable | FSS/NSS is a Windows-based application. |
| (o) A method shall be provided that permits users to skip repetitive navigation links.   | Not applicable | FSS/NSS is a Windows-based application. |
| (p) When a timed response is required, the user shall be alerted and given sufficient time to indicate more time is required.  | Not applicable | FSS/NSS is a Windows-based application. |

Note to 1194.22: The Board interprets paragraphs (a) through (k) of this section as consistent with the following priority 1 Checkpoints of the Web Content Accessibility Guidelines 1.0 (WCAG 1.0) (May 5 1999) published by the Web Accessibility Initiative of the World Wide Web Consortium: Paragraph (a) - 1.1, (b) - 1.4, (c) - 2.1, (d) - 6.1, (e) - 1.2, (f) - 9.1, (g) - 5.1, (h) - 5.2, (i) - 12.1, (j) - 7.1, (k) - 11.4.

[Return to the top of the page. C:\Users\csc\AppData\Local\Microsoft\Windows\Local Settings\Temporary Internet Files\OLK42\VPAT.html](C:\Users\csc\AppData\Local\Microsoft\Windows\Local Settings\Temporary Internet Files\OLK42\VPAT.html)

## Section 1194.23 Telecommunications Products – Detail

### VPAT™

### Voluntary Product Accessibility Template®

| <b>Criteria</b>  | <b>Supporting Features</b> | <b>Remarks and explanations</b> |
|--|----------------------------|---------------------------------|
| (a) Telecommunications products or systems which provide a function allowing voice communication and which do not themselves provide a TTY functionality shall provide a standard non-acoustic connection point for TTYs. Microphones shall be capable of being turned on and off to allow the user to intermix speech with TTY use. | Not applicable             |                                 |
| (b) Telecommunications products which include voice communication functionality shall support all commonly used cross-manufacturer non-proprietary standard TTY signal protocols.  | Not applicable             |                                 |
| (c) Voice mail, auto-attendant, and interactive voice response telecommunications systems shall be usable by TTY users with their TTYs.  | Not applicable             |                                 |
| (d) Voice mail, messaging, auto-attendant, and interactive voice response telecommunications systems that require a response from a user within a time interval, shall give an alert when the time interval  | Not applicable             |                                 |

|   |                |  |
|---|----------------|--|
| is about to run out, and shall provide sufficient time for the user to indicate more time is required.  |                |  |
| (e) Where provided, caller identification and similar telecommunications functions shall also be available for users of TTYs, and for users who cannot see displays.  | Not applicable |  |
| (f) For transmitted voice signals, telecommunications products shall provide a gain adjustable up to a minimum of 20 dB. For incremental volume control, at least one intermediate step of 12 dB of gain shall be provided.                               | Not applicable |  |
| (g) If the telecommunications product allows a user to adjust the receive volume, a function shall be provided to automatically reset the volume to the default level after every use.  | Not applicable |  |
| (h) Where a telecommunications product delivers output by an audio transducer which is normally held up to the ear, a means for effective magnetic wireless coupling to hearing technologies shall be provided.   | Not applicable |  |
| (i) Interference to hearing technologies (including hearing aids, cochlear implants, and assistive listening devices) shall be reduced to the lowest possible level that allows a user of hearing technologies to utilize the telecommunications product. | Not applicable |  |
| (j) Products that transmit or conduct information or communication, shall pass through cross-manufacturer, non-proprietary, industry-standard codes, translation protocols, formats or other  | Not applicable |  |

|   |                |  |
|---|----------------|--|
| information necessary to provide the information or communication in a usable format. Technologies which use encoding, signal compression, format transformation, or similar techniques shall not remove information needed for access or shall restore it upon delivery.                                     |                |  |
| (k)(1) Products which have mechanically operated controls or keys shall comply with the following: Controls and Keys shall be tactilely discernible without activating the controls or keys.  | Not applicable |  |
| (k)(2) Products which have mechanically operated controls or keys shall comply with the following: Controls and Keys shall be operable with one hand and shall not require tight grasping, pinching, twisting of the wrist. The force required to activate controls and keys shall be 5 lbs. (22.2N) maximum. | Not applicable |  |
| (k)(3) Products which have mechanically operated controls or keys shall comply with the following: If key repeat is supported, the delay before repeat shall be adjustable to at least 2 seconds. Key repeat rate shall be adjustable to 2 seconds per character.   | Not applicable |  |
| (k)(4) Products which have mechanically operated controls or keys shall comply with the following: The status of all locking or toggle controls or keys shall be visually discernible, and discernible either through touch or sound.   | Not applicable |  |

## ***Section 1194.25 Self-Contained, Closed Products – Detail***

### **VPAT™**

### **Voluntary Product Accessibility Template®**

| <b><i>Criteria</i></b>   | <b>Supporting Features</b> | <b>Remarks and explanations</b> |
|--|----------------------------|---------------------------------|
| (a) Self contained products shall be usable by people with disabilities without requiring an end-user to attach Assistive Technology to the product. Personal headsets for private listening are not Assistive Technology. | Not applicable             |                                 |
| (b) When a timed response is required, the user shall be alerted and given sufficient time to indicate more time is required.  | Not applicable             |                                 |
| (c) Where a product utilizes touchscreens or contact-sensitive controls, an input method shall be provided that complies with §1194.23 (k) (1) through (4).  | Not applicable             |                                 |
| (d) When biometric forms of user identification or control are used, an alternative form of identification or activation, which does not require the user to possess particular biological                                 | Not applicable             |                                 |

|  |                |  |
|--|----------------|--|
| characteristics, shall also be provided.   |                |  |
| (e) When products provide auditory output, the audio signal shall be provided at a standard signal level through an industry standard connector that will allow for private listening. The product must provide the ability to interrupt, pause, and restart the audio at anytime.   | Not applicable |  |
| (f) When products deliver voice output in a public area, incremental volume control shall be provided with output amplification up to a level of at least 65 dB. Where the ambient noise level of the environment is above 45 dB, a volume gain of at least 20 dB above the ambient level shall be user selectable. A function shall be provided to automatically reset the volume to the default level after every use. | Not applicable |  |
| (g) Color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.   | Not applicable |  |
| (h) When a product permits a user to adjust color and contrast settings, a range of color selections capable of  | Not applicable |  |

|   |                       |  |
|---|-----------------------|--|
| <p>producing a variety of contrast levels shall be provided.</p>  |                       |  |
| <p>(i) Products shall be designed to avoid causing the screen to flicker with a frequency greater than 2 Hz and lower than 55 Hz.</p>   | <p>Not applicable</p> |  |
| <p>(j) (1) Products which are freestanding, non-portable, and intended to be used in one location and which have operable controls shall comply with the following: The position of any operable control shall be determined with respect to a vertical plane, which is 48 inches in length, centered on the operable control, and at the maximum protrusion of the product within the 48 inch length on products which are freestanding, non-portable, and intended to be used in one location and which have operable controls.</p> | <p>Not applicable</p> |  |
| <p>(j)(2) Products which are freestanding, non-portable, and intended to be used in one location and which have operable controls shall comply with the following: Where any operable control is 10 inches or less behind the reference plane, the height shall be 54 inches maximum and 15 inches</p>  | <p>Not applicable</p> |  |

|  |                |  |
|--|----------------|--|
| minimum above the floor.   |                |  |
| (j)(3) Products which are freestanding, non-portable, and intended to be used in one location and which have operable controls shall comply with the following: Where any operable control is more than 10 inches and not more than 24 inches behind the reference plane, the height shall be 46 inches maximum and 15 inches minimum above the floor. | Not applicable |  |
| (j)(4) Products which are freestanding, non-portable, and intended to be used in one location and which have operable controls shall comply with the following: Operable controls shall not be more than 24 inches behind the reference plane.   | Not applicable |  |

***Section 1194.41 Information, Documentation and Support – Detail***

**VPAT™**

**Voluntary Product Accessibility Template®**

| <b>Criteria</b>   | <b>Supporting Features</b>               | <b>Remarks and explanations</b>  |
|---|--|--|
| (a) Product support documentation provided to end-users shall be made available in alternate formats upon request, at no additional charge  | Supports                                 | Documentation is provided via web pages and updated versions can be viewed and downloaded as they become available.  |
| (b) End-users shall have access to a description of the accessibility and compatibility features of products in alternate formats or alternate methods upon request, at no additional charge. | Supports through Equivalent Facilitation | Windows supports assistive technologies to provide this support. Product features are all accessible by screen readers through Windows support on the desktop and browser support for the web sites. |
| (c) Support services for products shall accommodate the communication needs of end-users with disabilities.   | Supports                                 | Support services include in person, telephone, email, and web portal. Special requests and arrangements can be made for other methods necessary upon request.  |
